PATENT COOPERATION TREATY From the INTERNATIONAL SEARCHING AUTHORITY REC'D 0 8 AUG 2006 G.E. EHRLICH (1995) LTD. 11 MENACHEM BEGIN STREET RAMAT GAN, ISRAEL 52 521 WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (PCT Rule 43bis.1) Date of mailing **03** AUG 2006 (day/month/year) Applicant's or agent's file reference FOR FURTHER ACTION 29953 See paragraph 2 below International application No. International filing date (day/month/year) Priority date (day/month/year) PCT/IL05/01173 09 November 2005 (09.11.2005) International Patent Classification (IPC) or both national classification and IPC 01 June 2005 (01.06.2005) IPC: A61K 49/00( 2006.01) USPC: 424/9.1 Applicant SPECTRUM DYNAMICS (ISRAEL) LTD. 1. This opinion contains indications relating to the following items: Box No. 1 Basis of the opinion Box No. II Priority Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability Box No. IV Lack of unity of invention Box No. V-Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement Box No. VI Certain documents cited Box No. VII Certain defects in the international application Box No. VIII Certain observations on the international application 2. FURTHER ACTION If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1bis(b) that written opinions of this International Searching Authority will not be so considered. If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later. For further options, see Form PCT/ISA/220. 3. For further details, see notes to Form PCT/ISA/220. Name and mailing address of the ISA/ US Date of completion of this opinion Mail Stop PCT, Attn: ISA/US Commissioner for Patents el-Harrish 03 July 2006 (03.07.2006) P.O. # WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.	
PCTALOGIOLISTS	

BOX 1	No. I Basis of this opinion
1. With	regard to the language, this opinion has been established on the basis of:
$\boxtimes$	the international application in the language in which it was filed
	a translation of the international analysis is the same of the same of the international analysis is the same of the sam
	a translation of the international application into, which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).
With inver	regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed
a.	type of material
	a sequence listing
	table(s) related to the sequence listing
b.	format of material
	on paper
	in electronic form
c.	time of filing/furnishing
	contained in the international application as filed.
	filed together with the international application in electronic form.
	furnished subsequently to this Authority for the purposes of search.
•	In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

### WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/IL05/01173

Box No. V Reasoned statement under Rule 43 bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement					
1. Statement	A & Suscincit				
Novelty (N)	Claims 5 and 6 Claims 1-4	YES			
Inventive step (IS)	Claims <u>NONE</u> Claims <u>1-6</u>	YES NO			
Industrial applicability (IA)	Claims 1-6 Claims NONE	YES			
2. Citations and evaluations					

#### 2. Citations and explanations:

Claims 5 and 6 meet the criteria set out in PCT Article 33(2) because the prior art does not teach the claim limitations as written.

Claims 1-4 lack novelty under PCT Article 33(2) as being anticipated by Contag et al (US Patent No. 6,638,752).

Contag et al disclose biodetectors targeted to specific ligands. The biodetectors are used for detecting and quantifying molecules in liquid, gas, or matrices. The method involves biodetectors comprising a molecular switching mechanism to express a reporter gene upon interaction with target substances. For example, imaging of the light emitting biodetector entities may involve the use of a photodetector. If necessary, localization of the signal may be determined by integrating photon emission until and image is constructed. Once a photon emission image is generated, it is typically superimposed on a normal reflected light image of the subject to provide a frame of reference for the source of the emitted photons. Such a composite image is then analyzed to determine the location and/or amount of a target in the subject. Simple quantitation of the numbers of photons emitted from a sample indicate the concentration of the light-emitting reporter. The number of photons would therefore be proportional to the amount of targeted ligand that a specific detector is sensing. Without the constraints imposed by the need for an image, detectors may be place in very close proximity to the light emitting biodetectors; thus, optimizing the optical detection and sensitivity of the assay. Microchannel plate intensifiers may be used in such a configuration resulting in single photon detection (see column 8, lines 28-68; column 9, lines 25-54; column 16, lines 13-52). The signals generated by photodetector devices which count photons need to be processed by an image processor in order to construct an image which can be, for example, displayed on a monitor or printed on a video printer. Such image processors are typically sold as part of systems which include the sensitive photon counting cameral. The image processors are usually connected to a personal computed (column 17, lines 28-46). The biodetectors may be used to diagnose diseases, detect clinically relevant substances, detect environmental contaminants, and detect food contaminants (column 18, line 28 through column 19, line 54). Thus, both Applicant and Contag et al disclose a method of radioactive emission measures of a structure wherein radioactive emission measurement of a body are determined; radioactive emission measurements are analyzed; and additional views for measurement are analyzed.

Claims 5 and 6 lack an inventive step under PCT Article 33(3) as being obvious over Contag et al (US Patent No. 6,638,752). Contag et al (see discussion above) fail to specifically state that the additional views comprising determining that a photon count at a given view yields a measurement error below a specified value. However, it would have been obvious to one of ordinary skill at the time the invention was made that the additional views would be analyzed for error below a specified value because a skilled practitioner in the art would recognize that the duplicate images at specified conditions would enable one to determine the standard of deviation and mean value between the images.

Claims 1-6 meet the criteria set out in PCT Article 33 (4), and thus have industrial applicability because the subject matter claimed can
